**Abstract** Kennedy's disease is an X-linked recessive hereditary disease that is a rare clinically difficult condition. Professor Liu Xiaobin is the academic heir of Professor Deng Tietao, a master of Chinese medicine. He believes that the cause of this disease is due to the deficiency of innate endowment and the deficiency of viscera and organs, and inherits Professor Deng Tietao's method of “strengthening muscle, boosting qi and fortifying the spleen, supplementing liver and kidney” to treat this disease. It has a good effect in delaying the progression of symptoms in patients with Kennedy disease and improving the quality of life. In this paper, 2 patients with confirmed genetic disease have a long course of disease, and take long-term regular Chinese medicine conditioning. After several years of follow-up, they can now carry out daily activities normally. So the paper can also serve as some reference for colleagues.
