摘 要:新型冠状病毒目前无特效药物治疗,但中医药作为我国传统医学,在此次疫情的防治中发挥着举足轻重的作用。在防治疫情期间,部分省、市、自治区均在国家《新型冠状病毒诊疗方案》的基础上结合各自地域、气候等特点,发布了不同地区的中西医结合版新冠防治方案;针对新冠疫情的人群普遍易感及小儿素体虚弱的特点,不同地区也相继发布了关于新冠肺炎儿童防治的方案,其中河南省辨体选方与北京、黑龙江代茶饮剂型更加突出了传统医学的特色。儿童辨体预防与代茶饮剂型思路,为此次疫情儿童复学后各地区中医药防疫方案提供了较好的指导方向。

Abstract: At present, COVID – 19 has no specific drug treatment, but Chinese medicine as a traditional medicine in China plays a decisive role in the prevention and treatment of the epidemic. COVID – 19 prevention and control programs were released in different provinces, municipalities and autonomous regions on the basis of the national COVID – 19 diagnosis and treatment plan, combining the characteristics of their respective regions and climates. During the epidemic prevention and control, the new crowns of different regions were integrated into the new and Western medicine. In view of the general susceptibility of COVID – 19 and the weakness of children’s body, various areas also issued prevention and treatment of COVID – 19 children. Among them, Henan Province and Beijing and Heilongjiang tea substitute drink formulations highlight the characteristics of traditional medicine. The idea of children’s body differentiation prevention and tea substitute formulation provides a good direction for the epidemic prevention program of traditional Chinese medicine in various regions after the epidemic children return to school.

Key words: COVID – 19; Prevention; Children; Chinese Medicine

随着 2020 年 1 月新冠装病毒在我国的流 行、爆发,我国果断、高效的隔离配合中西医结合
